

Introduction

20 September 2023 11:34 AM

- Java → is higher to C++
- Big community
- simple syntax compared to C++,
- Platform independent

1990 Java
byte code compile

Internet
1991
HTTP

Java security
 ② → memory management
 garbage collection

→ oops
 → Java every thing is object.

int → Integer
 double → Double
 float → Float
 boolean → Boolean

dog → r-
flower → Doodle
book →
everything object | new 0

- application
- web application
- server, cloud computing
- games, mobile application
- desktop application
- Robotics, embedded system

→ Java completed object oriented

```
int main ( ) {  
    printf("Hello world");  
}
```

>
Public ~~FirstApp~~ {

Public Static void main() {
System.out.println("Hello world");
• Print
}

} default, Public, Private
protected,

```
public class Main {
```

one time loading during
compilation

```
    public static void main(String[] args) {
```

```
        // here we need to perform some action on the student  
        System.out.println("Hello world");
```

```
        Student st = new Student("komal", 21, 5.6);
```

```
        st.display();
```

public:

main.main()

```
    }
```
